

Common Threads: Session 7
Unleashing the Dragon: Update on Impact of RELAXING OF STATE CANNABIS LAWS

Mark C. Bicket, M.D., Ph.D.
*Associate Professor of Anesthesiology
Director, Pain & Opioid Research
Co-Director, Overdose Prevention Engagement Network (OPEN)
University of Michigan Medical School
www.michigan-OPEN.org*

Disclosures

- Research reported in this presentation was supported by the National Institute of Drug Abuse of the National Institutes of Health under award number R01DA049789.
- The content is solely the responsibility of the authors and does not necessarily represent the official views of the National Institutes of Health.
- No other disclosures.

Session Learning Objectives

- 01 | Interpret how changes to state cannabis laws have impacted health outcomes related to cannabis use.
- 02 | Analyze patient attitudes and outcomes related to cannabis use since the implementation of several medical cannabis laws.

What are the differences between recreational and medical cannabis programs?

What are the differences between recreational and medical cannabis programs?

Characteristic	Recreational Cannabis	Medical Cannabis
Purpose	General use for social, other reasons	Treatment for qualifying medical conditions or diagnoses
Age limits	21 years or over	Minors permitted for some states
Purchase/possession limits	Lower	Higher
Taxes	Higher	Lower
Access limits	None usually	Physician written certification Disclosure of risks/benefits

Mixed Messages on Cannabis for Chronic Pain

"There is conclusive or substantial evidence that cannabis or cannabinoids are effective ... for the treatment of chronic pain in adults."

Mixed Messages on Cannabis for Chronic Pain

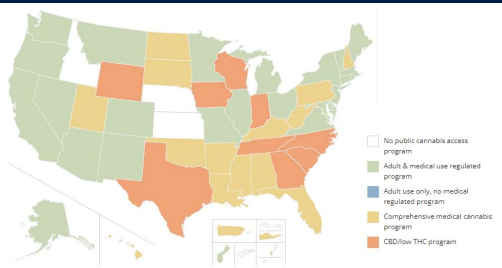

"There is conclusive or substantial evidence that cannabis or cannabinoids are effective ... for the treatment of chronic pain in adults."

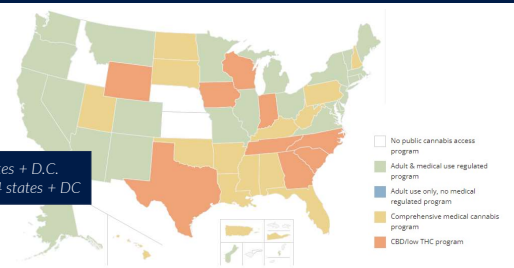

"The potential benefits ... might be outweighed by their potential harms."

Landscape of State Laws on Cannabis 2024

Landscape of State Laws on Cannabis 2024

*Medical: 38 states + D.C.
Recreational: 24 states + DC*

Early studies on cannabis use and outcomes show mixed to favorable results.

Outcome	Number of Studies	Finding
Opioid prescribing	8	↓
Opioid misuse and opioid use disorder	4	↑ / -
Opioid-related healthcare utilization	3	↓ / - / ↑
Mortality from opioids	4	↓

Tornøhlen et al. (2021)
The state of the evidence on the association between state cannabis laws and opioid-related outcomes: A review. Current Addiction Reports DOI: 10.1007/s40429-021-00397-1

Challenges in studies examining state laws on cannabis with opioid outcomes:

-  Indirect measures of cannabis-opioid substitution.
-  Use of general population samples.
-  Potential effects of other recently enacted state laws.
-  Staggered years of implementing cannabis laws.
-  Various provisions within each cannabis law.

Tornøhlen et al. (2021)
The state of the evidence on the association between state cannabis laws and opioid-related outcomes: A review. Current Addiction Reports DOI: 10.1007/s40429-021-00397-1

Challenges in studies examining state laws on cannabis with opioid outcomes:

-  Indirect measures of cannabis-opioid substitution.
-  **Use of general population samples.**
-  Potential effects of other recently enacted state laws.
-  Staggered years of implementing cannabis laws.
-  Various provisions within each cannabis law.

The state of the evidence on the association between state cannabis laws and opioid-related outcomes: A review. Current Addiction Reports DOI: 10.1007/s40429-021-00397-1

Methods Issue: Use of General Population Samples

Main hypothesis:

Methods Issue: Use of General Population Samples

Main hypothesis:

Cannabis access from state laws

Substitution of cannabis for opioid prescription to treat chronic pain

Relevant population:

Past Studies:
General population

Ideal Study:
Persons with chronic pain

Challenges in studies examining state laws on cannabis with opioid outcomes:

Indirect measures of cannabis-opioid substitution.

Use of general population samples.

Potential effects of other recently enacted state laws.

Staggered years of implementing cannabis laws.

Various provisions within each cannabis law.

Tarmolien et al. (2021)
The state of the evidence on the association between state cannabis laws and opioid-related outcomes: A review. Current Addiction Reports DOI: 10.1007/s40429-021-00397-1

Methods Issue: Staggered Years of Implementing Medical Cannabis Laws

Past studies: Single state or year comparisons of pre/post vs. control

Methods Issue: Staggered Years of Implementing Medical Cannabis Laws

Past studies: Single state or year comparisons of pre/post vs. control

Ideal study: Aggregate or stack comparisons into single estimate

Medical cannabis laws – do they influence opioid prescribing and pain treatment?

Background

- 12 states with medical cannabis and 17 states without medical cannabis
- 2010-2022
- 583,820 patients
- Commercial insurance

Chronic Non-Cancer Pain

Key Outcomes

- Any opioid prescription
- Any non-opioid prescription
- Any pain related procedure

McGlinn et al. (2023) Effects of U.S. State Medical Cannabis Laws on Treatment of Chronic Noncancer Pain. *Annals of Internal Medicine*. doi:10.7326/M23-0053.

Annals of Internal Medicine

Medical cannabis laws – do they influence opioid prescribing and pain treatment?

Compare each medical cannabis state to a synthetic control.

Medical C. Law OK State Question 788 (2018)
 Law implemented 26 Oct 2018
 Study period 1 Nov 2014 – 31 Oct 2021
 Recreational C. Law None

Cannabis Use Disorder TOOLKIT

The Team

Key Points

1

Cannabis has become more accessible with the implementation of state laws that permit two different channels for access.

2

Medical cannabis programs differ from recreational programs in key features.

3

While early studies on cannabis laws suggested changes in opioid prescribing and pain outcomes, controlling for bias has led to more accurate estimates of their potential impact.

4

Cannabis is viewed by patients as a safer treatment than some commonly offered treatments for pain.

5

Some pain outcomes may be worse among active and past users of cannabis, though differences don't seem to be clinically meaningful.

Knowledge Check

The clinical effects of classic psychedelics in cluster headache are reported for:

A

No meaningful differences appear for opioid and pain outcomes

B

Opioid prescriptions increased while non-opioid prescriptions decreased significantly

C

The rate of pain related procedures decreased significantly

D

Non-opioid prescribing increased significantly

Knowledge Check

The clinical effects of classic psychedelics in cluster headache are reported for:

A

No meaningful differences appear for opioid and pain outcomes ✓

B

Opioid prescriptions increased while non-opioid prescriptions decreased significantly ✗

C

The rate of pain related procedures decreased significantly ✗

D

Non-opioid prescribing increased significantly ✗

Knowledge Check

Which of the following is true regarding changes in pain treatments among persons with chronic pain based on their cannabis use?

- A** All patients reported using less over-the-counter analgesics.
- B** Most patients (>50%) reported using more physical therapy services.
- C** Half of patients (~50%) reported using less prescription opioids.
- D** Few patients reported using more prescription non-opioid analgesics.

Knowledge Check

Which of the following is true regarding changes in pain treatments among persons with chronic pain based on their cannabis use?

- A** All patients reported using less over-the-counter analgesics. **X**
- B** Most patients (>50%) reported using more physical therapy services. **X**
- C** Half of patients (~50%) reported using less prescription opioids. **✓**
- D** Few patients reported using more prescription non-opioid analgesics. **X**

Knowledge Check

Among persons with chronic pain, how does the perception of safety of cannabis compare to prescription opioids?

- A** The safety of cannabis is perceived to be greater than prescription opioids.
- B** The safety of cannabis is perceived to be less than prescription opioids.
- C** Both cannabis and prescription opioids are perceived to be very safe.
- D** Both cannabis and prescription opioids are perceived to be very unsafe.

Knowledge Check

Among persons with chronic pain, how does the perception of safety of cannabis compare to prescription opioids?

- A** The safety of cannabis is perceived to be greater than prescription opioids. **✓**
- B** The safety of cannabis is perceived to be less than prescription opioids. **X**
- C** Both cannabis and prescription opioids are perceived to be very safe. **X**
- D** Both cannabis and prescription opioids are perceived to be very unsafe. **X**

Knowledge Check

Among persons with chronic pain, how does the perception of effectiveness of cannabis compare to prescription opioids for treating chronic pain?

- A** The effectiveness of cannabis is perceived to be greater than prescription opioids.
- B** Both cannabis and prescription opioids are perceived to be moderately effective.
- C** Both cannabis and prescription opioids are perceived to be very safe.
- D** Both cannabis and prescription opioids are perceived to be not effective.

Knowledge Check

Among persons with chronic pain, how does the perception of effectiveness of cannabis compare to prescription opioids for treating chronic pain?

- A** The effectiveness of cannabis is perceived to be greater than prescription opioids. ✓
- B** Both cannabis and prescription opioids are perceived to be moderately effective. ✗
- C** Both cannabis and prescription opioids are perceived to be very safe. ✗
- D** Both cannabis and prescription opioids are perceived to be not effective. ✗

Thank You!
